BACKGROUND

Central South University of Forestry and Technology

Sep 2023 – Jun 2027 (expected)

BSc in Finance • GPA 3.4/4.0

Languages & certificates: CET-6 580+ (working proficiency); Junior Accounting Professional Title (Accounting Practice, Economic Law); solid accounting fundamentals.

Strengths: 1. Rapid learning and breadth of thinking: define users, pain points and product scope through business interviews, and deliver PRDs. 2. Hands-on AI delivery: 0→1 practice across multiple scenarios. 3. Data closed loop: turn complex data into structured assets that support decisions. Portfolio: <https://gaibian005.github.io/portfolio/>

INTERNSHIP EXPERIENCE

Guangdong COROS Sports Technology Co., Ltd. Finance Digitalization Specialist | May–Aug 2026

[Digital product] As a product manager, took part in the full lifecycle of the overseas expense control system from kickoff to UAT acceptance: owned phase-one requirements, product solution design and the master-data cleanup and migration of legacy documents, and contributed to the design and implementation of front-end interaction pages, **helping the system finish development about 20 days ahead of plan.**

[Accounting automation] Researched accounting automation needs and assessed business risks and technical routes; independently built or drove 8 requirements to launch, cutting average work time by 80%.

[AI adoption] Drove the hands-on adoption of in-house and proven AI tools in finance workflows; wrote 9 knowledge-base articles for business users.

Shanghai Dewu Information Group Co., Ltd.

AI Operations Intern | Nov 2025 – Jan 2026

[Market analysis] Tracked the market dynamics and development roadmaps of LLMs, agents and supporting tools; produced weekly and monthly reports with trend analysis.

[Project management] Followed the agile development of multiple AI products and automation tools, kept requirements and iteration documents up to date, and wrote 5 rollout and training cases.

Tianzhi International CPA (Hunan)

FMCG IPO Audit Intern | Jun–Sep 2025

[Control testing] Assisted with AR/AP working papers; performed walkthrough testing along the chain “document → business → source voucher → journal voucher → subsidiary ledger → general ledger → statements”, covering the full data flow from business events to reporting across multiple entities.

[Risk identification] Standardised financial data for the due-diligence team and identified internal-control gaps such as rebate expenses lacking automated validation and related-party fund transfers flagged manually.

PROJECT EXPERIENCE

COROS Overseas Expense Control System

Product Manager – Phase One | May–Aug 2026

Key results: Went live on 1 Sep 2026, about 20 days ahead of plan; SIT and UAT were completed in full and the system moved into use quickly.

Project background and pain points: Contracts, invoices and expense/withdrawal claims of overseas subsidiaries were spread across multiple disconnected flows: payment progress was invisible, the approval chain was coupled with month-end closing, and information relied on manual entry.

[Requirements structuring] Aligned the language of business, finance, R&D and compliance; structured fragmented inputs into development-ready requirements; narrowed the phase-one scope (sub-process AI kept, main-process AI deferred).

[Product solution] Delivered a solution covering nine modules and three independent approval flows, addressing core needs including document linkage, process decoupling, data visibility, compliance restructuring and system independence.

[Master-data cleanup] Independently owned the technical selection, solution design and implementation of master-data mining and cleanup across tens of thousands of legacy documents: split the work into 11 layered batches to avoid SQLite single-writer lock conflicts; mined data in layers using text-layer extraction, OCR and multimodal recognition, and used LLM-based semantic judgement to supplement the cleanup scripts; cross-validated records by file hash, file size and text content. Finally, 85%+ of invoice and contract records, 90%+ of supplier records and 70%+ of in-transit documents entered the master-data centre, saving the finance team 1–2 months of work.

[Front-end design and development] Independently delivered the interactive high-fidelity prototype; implemented the interaction details of document statuses and approval nodes in HTML/CSS/JS, which entered the released version after alignment with engineering.

Tencent AI Product Training Camp: Quote Translator

Product Manager | Aug–Sep 2026

Key results: Defined the product form and differentiation, designed the operating pipeline, and delivered an interactive high-fidelity prototype and the test plan.

Users and pain points: Non-professional users of a wealth-management App who “see a stock move but cannot understand what happened within a few minutes” .

[Product definition] Positioning: (1) explain professional information in plain language; (2) surface overlooked price/volume, fund-flow and sentiment signals and push them proactively.

[Operating design] To mitigate LLM hallucination, notification fatigue and compliance risk, designed the pipeline “data collection → standardisation → rule-based monitoring → RAG evidence retrieval → LLM attribution → fact/compliance validation → conversational delivery → tiered human review → behaviour feedback” , with three output states (evidenced / weakly evidenced / uncertain), evidence chains and a red-line downgrade mechanism.

[Interactive prototype] Independently delivered and launched an interactive high-fidelity prototype covering the key interactions: <https://gaibian005.github.io/Interactive-prototype/>

[Test plan] Produced the test plan; defined the test system, development grading and launch criteria: L3 required for canary release; full rollout only when stable at L4 with a complaint rate $\leq 4\%$.
