## BACKGROUND

**Central South University of Forestry and Technology**

**Sep 2023 - Jun 2027 (expected)**

**BSc in Finance**

**Languages & certificates:** CET-6 580+ (working proficiency); Junior Accounting Professional Title (Accounting Practice, Economic Law); solid professional foundation.

**Skills:** Python, HTML (CSS, JS), SQL, Visio, Figma, Feishu, Jira, Excel, Word, PowerPoint, agent collaboration, documentation and case analysis.

**Portfolio:** <https://gaibian005.github.io/portfolio/>

## INTERNSHIP EXPERIENCE

**Guangdong COROS Sports Technology Co., Ltd. Finance Digitalization Specialist | May-Aug 2026**

**[Finance digitalization product]** As a product manager, took part in the overseas expense control system across the whole process from project kick-off to UAT acceptance: owned phase-one requirement alignment and product solution design, the master-data cleanup and transfer of legacy documents, and contributed to the design and implementation of the web front-end interaction pages, **helping development finish about 20 days ahead of plan.**

**[Accounting automation]** Researched finance accounting automation needs and assessed automation risks and technical routes; developed and pushed forward the launch of **8 feature requirements, cutting average work hours by 80%.**

**[AI adoption]** Drove the hands-on adoption of a self-developed agent and proven AI products in vertical finance business scenarios. **Wrote 9 knowledge-base documents for business users.**

**Shanghai Dewu Information Group Co., Ltd. (Dewu) AI Operations Intern | Nov 2025 - Jan 2026**

**[Market analysis]** Researched the market dynamics and new development roadmaps of multiple large models, agents and supporting tools; produced weekly and monthly reports to support project development.

**[Project management]** Followed the agile development process of AI products and digitalization tools, pushed the process forward and wrote **5 rollout training cases**, maintaining and updating project requirement and iteration decision documents.

**Tianzhi International CPA (Hunan)**

**FMCG IPO Audit Intern | Jun-Sep 2025**

**[Control testing]** Assisted with the working-paper preparation of key receivable and payable accounts; performed circular walkthrough tests along the chain "document → business → source voucher → journal voucher → subsidiary ledger → general ledger → statements", understanding the complete information chain of multi-entity financial data from the business side to the reporting side.

**[Risk identification]** Worked with the due-diligence team to standardize financial data and identified internal-control issues such as rebate expenses lacking automated validation and related-party fund transfers being marked manually.

## PROJECT EXPERIENCE

---

### COROS Overseas Expense Control System

Product Manager | May-Aug 2026

**Key results:** Drove the system live about 20 days ahead of plan; SIT/UAT was fully completed and the system quickly entered business use.

**Project background and pain points:** Contracts, invoices and withdrawal/reimbursement documents of overseas subsidiaries were scattered across multiple processes, payment progress was difficult to query, the payment approval chain was coupled with month-end closing, and data relied on manual entry.

**[Requirement alignment]** Aligned the language of business, finance, R&D and compliance; turned fragmented requirements into clearly documented requirements and narrowed the phase-one scope (kept sub-process AI pre-filling, deferred main-process AI alerts).

**[Product solution]** Delivered a solution of nine modules and three independent approval flows, addressing core needs such as document linkage, process decoupling, data visualization, compliance restructuring, simplified operations and system independence.

**[Financial data mining and cleanup]** Independently completed the technology selection, solution design and implementation of master-data mining and cleanup across tens of thousands of legacy documents: designed 11 layered sub-batches to avoid SQLite conflicts; mined data in layers by text layer, OCR and multimodal recognition; used LLM reasoning to supplement Python & SQL cleanup scripts; and cross-checked data with multiple clues including file hash, file size and text content. In the end, 85%+ of invoices and contracts, 90%+ of suppliers and 70%+ of in-transit documents entered the master-data center, **saving 1-2 months of manual work.**

**[Front-end design and development]** Independently completed the interactive high-fidelity prototype; used HTML/CSS/JS to implement the interaction details of the document state machine and approval nodes, **directly helping the system go live ahead of schedule.**

### Tencent AI Training Camp: Market-Move Advisor Assistant

Product Manager | Aug-Sep 2026

**Key results:** Defined the product form and differentiation, designed the operating plan, launched an interactive high-fidelity prototype and produced the launch test plan.

**Project users and pain points:** Built for users without a professional background in a wealth-management App, solving their problem of "seeing a watchlist move but being unable to quickly understand what happened within a few minutes".

**[Product definition]** Positioning: 1. translate multi-dimensional professional information into plain language users can understand; 2. discover overlooked price-volume, capital-flow and sentiment signals and push them proactively.

**[Operating design]** To avoid LLM hallucination, notification disturbance and compliance risk, designed the chain "data collection → standardization → rule monitoring → RAG evidence → LLM attribution → fact/compliance validation → conversational delivery → tiered human review → behavior feedback", and established three output states (evidenced / weakly evidenced / uncertain), evidence chains and a red-line downgrade mechanism.

**[Interactive prototype]** Independently completed and launched an interactive high-fidelity prototype covering the key interactions and information: <https://gaibian005.github.io/Interactive-prototype/>

**[Test plan]** Produced the test plan documentation, defining the test system as well as development grading and launch standards.
